## 第三次作业 (Weyl's Lemma)

请于三**月十四日周五(校历第四周)** 当堂上交本次作业。请独立完成。如有参与讨论者,请引用或致谢他们。

1. A continuous function f is weakly-analytic on a region  $\Omega$  if

$$\int_{\Omega} f \frac{\partial \phi}{\partial \overline{z}} dA = 0,$$

for all compactly supported continuously differentiable functions  $\phi$  on  $\Omega$ . Here dA denotes the area element. Prove that a continuous function is weakly-analytic if and only if it is analytic.
